

DRUM & CONTAINER PUMPS

OPERATION & SERVICE GUIDE

Read and understand operation and service guide before commissioning.

GENERAL INFORMATION / UPON RECEIVING

Read and understand operation and service guide before commissioning.

GENERAL INFORMATION

- 1.Check chemical chart to match the suitable material of the pump to the liquid you wish to pump. When selecting a pump, please take into account of criteria such as capacity, head, temperature, viscosity, liquid, solid size and chemical resistance before ordering.
- 2. Check power, voltage, fitting conditions, electrical connections and working conditions before commissioning.
- 3. Hose barbs are standard size 1" (25.4mm) or special size 3/4" (22mm).

UPON RECEIVING

- 1. Please check if pump model on the name plate corresponds to your order.
- 2. Check motor and pump for any damages upon receiving.
- Make sure motor and pump has been fully installed and all connections and pipes have been connected

OPERATING INSTRUCTIONS

- 1. Make sure hand wheel and all connections are securely fastened.
- The maximum particle size must not exceed 3 mm. Use strainer for size over 3mm.
- 3. Do not store pump in a humid and corrosive environment.
- 4. Handle motor and pump with care.
- Use F.R.L. combination unit (Air Filter, Regulator and Lubricator) for HD-A series air motors.
- 6. Turn on the air or power only after pump and pipes are in place.
- 7. Always start the air from low to high to extend the life time of the pump.
- 8. Make sure the voltage is connected according to correct electrical specification.
- 9. Motor is equipped with overload protection switch to allow dry running.
- 10. Do not leave pump unattended during operation.
- 11. Drum Pump is suitable to handle fluids with viscosity up to 800 CPS and up to 1000 CPS with high pressure impeller. Use high viscosity screw pump or Air operated double-diaphragm pump for transferring high viscosity fluids.
- 12. If strange noise occurs, check if the suction hose is obstructed by particles and colliding with impeller.
- 13. For safety, please properly bond and ground when handling solvent or flammable fluids.
- 14. Make sure pump and motor is properly and securely fasten, or otherwise, could result in serious damage to the couplings.
- 15. Set the switch "OFF" position before installation of motor and pump.
- 16. Never submerge motor in liquid or splash motor with liquid.

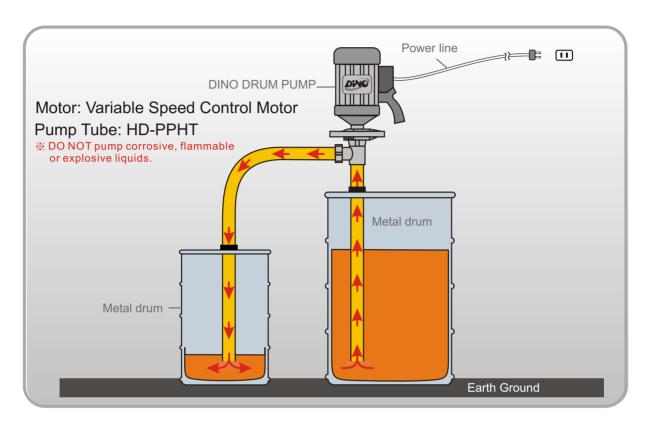

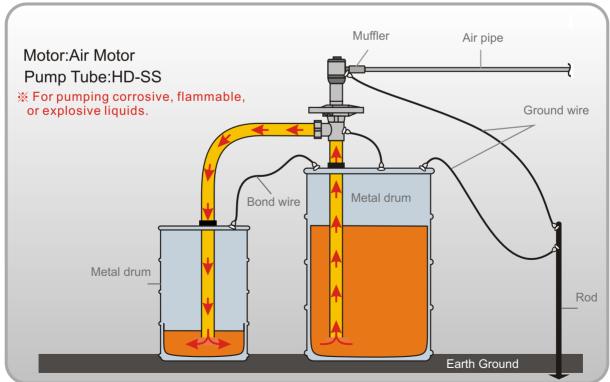

SUGGESTED INSTALLATION

For safety, please properly bond and ground when handling solvent or flammable fluids as a static electric discharge could result in fire, explosion, injury or death.

Do not start the pump in case of any doubt, and contact with local distributor.

COMMON APPLICATIONS

■ DINO INDUSTRIES SERVED

Automotive Industry, Chemical Industry, Electronic Industry, Food, Beverages, Waste Water Treatment, Semi-Conductor, Refineries, Pharmaceutical Industry, Agriculture, Cosmetics, Construction Industry, Pulp/Paper Industry, Mining, Ship Industry, Textile Industry, Paint and Coating, Plating, LCD Industry....

APPLICATIONS

Container Type	Model	Length
5GAL Bottles	HD-material 700	700mm (27")
55GAL Drums (200L)	HD-material 1000	1000mm (39")
Barrels & Tanks	HD-material 1200	1200mm (47")
IBC'S	HD-material 1500	1500mm (60")
Large Storage Vessels	HD-material 1800	1800mm (72")

COMMON APPLICATIONS

Material	Max. Temp	Common Applications
PPHT (Polypropylene)	80° C/ 175 °F	 Acetic Acid Sulfuric Acid Hydrochloric - 20% Nitric Acid - 20% Alkalies Ferric Chloride
PVDF	130 °C/ 266 °F	 Concentrated Nitric Acid Sulfuric Acid-66 Baume Sodium Hypochlorite Propionic Acid Stearic Acid Hydrofluoric Acid
SS	100℃/212° F	 Alcohol · Gasoline Aqueous Ammonia Isopropyl Ether Solvents Petroleum Products

For safety, please properly bond and ground when handling solvent or flammable fluids.

TROUBLESHOOTING

MALFUNCTION	POSSIBLE CAUSES	TROUBLESHOOTING	
Motor fail to run	Overcurrent/ motor burned.	Check and repair or replace	
	Power short circuit or plug falls out.	Check and reconnect	
	Bearing unit abrasion.	Check and replace	
	Stator worn due to erosion.	Check and replace	
	Bad power connection.	Check and repair or replace	
	Switch	Check and replace	
	Unstable current, Motor overload.	Please install stabilizer or overload protector	
Pump suddenly stop in operating	Motor overheated.	Turn off the power and restart in 20 minutes.	
	Fluid too viscous.	check the viscosity for suitable pump.	
	Pump clogged	check and remove blockage; install or change strainer.	
	Air motor became slowly or stop	check the air supplier	
Pump rupture or deformed	Liquid temperature too high	check temperature with suitable material and replace	
	Suction/ discharge line not properly stable and vibration	make the suction/ discharge stability or replace.	
In normal operating, but the flow rate is small in pumping	Clogged	check and remove blockage; install or change strainer.	
	Impeller damage or abrasion	Check and replace	
	Connection not security tighten or damaged	Check and repair or replace	
	Liquid should higher than pump foot 2cm	Check and replace drum	
Excessive noise or vibration	Connections not security tighten.	Check and repair	
	Motor/ pump coupling abrasion or damage	Check and replace	
	Bearing unit abrasion	Replace	
	Shaft or guide sleeve abrasion	Replace	
	Suction/ discharge line not properly stable and vibration	Make the suction/ discharge stability or replace.	
	Shaft bushing abrasion	Replace	
Fluid leaking	Connections not security tighten.	Check and repair	
	Discharge leaking	check discharge O-ring and replace	
	Oil seal, shaft, bearing unit abrasion	Replace	

*Turn off the power and air supply immediately and contact info@dinopumps.com or your local representative if you still have problems.
